Education

New Jersey Institute of Technology - *B.S. in Computer Science*

May 2026

GPA: 3.5

- **Relevant Coursework:** ML, Computer Architecture, Data Science, Computational Theory, Database System Design, Principles of Operating Systems, Intensive Programming in Linux

Experience

Software Engineering Intern | *Wakefern Food Corp. Tech Division*

Feb 2026 – May 2026

- Contributed core features to a production event app for the ShopRite LPGA Classic including push notifications, sponsor management, and admin panel across a shared **Angular web + Ionic mobile** codebase.
- Built backend services in **Spring Boot** and containerized them with **Docker**, standardizing local/CI builds across the team.
- Implemented a normalized **PostgreSQL schema** supporting event scheduling, tiered sponsor relationships, and multi-role user profiles to avoid redundancy across **57 API endpoints**.
- Developed **RESTful API endpoints** serving personalized schedules, live leaderboard data, tee-time assignments, and role-scoped admin operations to a frontend under a shared **JWT auth model**.

Computer Science Course Assistant | *NJIT*

Jan 2024 – May 2026

- Tutored 100+ students in an Object-Oriented Programming course (**Java**), clarifying complex topics such as **inheritance, polymorphism, and advanced data structures**.
- Held regular office hours and group review sessions, significantly boosting average assignment completion rates.
- Evaluated and graded programming labs, projects, and exams, ensuring consistent application of grading standards.

Projects

Secure Sandbox Environment

- Designed and built a **Linux container sandbox** from scratch in C++, implementing the core isolation primitives that underpin containerization (namespaces, seccomp, cgroups) without Docker or any runtime framework.
- Designed and implemented a default-deny **seccomp syscall filter**, reducing the kernel attack surface to ~100 explicitly whitelisted calls and blocking all filesystem/namespace escape vectors.
- Enforced layered resource limits via **cgroups v2** (50% CPU quota, 256 MB memory, 64 PID cap) with setrlimit as a guaranteed fallback, preventing sandboxed processes from impacting host stability.
- Managed the full privilege lifecycle, dropping root to a dedicated unprivileged user post-setup while selectively preserving CAP_NET_RAW via Linux ambient capabilities to maintain network functionality across execve.

Covey.Town UI Feature Development

- Developed a coordinate-based virtual pet guide frontend using animated sprite sheets, real-time movement updates, and world-state synchronization to assist user navigation in Covey.Town's multiplayer environment.
- Collaborated on a 4-person **agile Scrum** team across 4 sprints, participating in sprint planning and stand-ups.
- Deployed via **AWS Lightsail** and maintained **CI/CD** pipelines to automate testing and deployments, reducing deployment errors by **60%** and enabling faster feature delivery.

Language Interpreter

- Built a custom interpreter for a Fortran-like language from scratch in C++, implementing a **recursive-descent parser** to convert source code into an executable program structure.
- Implemented an efficient lexer using strict string tokenization to process source code, handling a robust vocabulary of keywords, relational operators, literals, and identifiers.
- Designed and constructed an **Abstract Syntax Tree (AST)** using C++ class hierarchies and smart pointers to safely represent and manage program semantics without memory leaks.

Technical Skills

Languages: Java, Python, C, C++, SQL, TypeScript

Frameworks: Spring Boot, Angular, React.js, Node.js, Express.js, Next.js, Ionic

Databases: MySQL, PostgreSQL, Redis

Cloud & Tools: AWS, Git, GitHub, Linux/Unix, Docker
